How to use this deck

Please connect with Al Infranco or Robert Fenwick

EPAM Continuum Proprietary & Confidential.

Why Our Sales Deck Uses Text-Dense Slides

These slides are designed as conversation tools for expert sales teams—not presentation slides for passive audiences.

1. Our Sales Team Are Expert Guides, Not Slide Readers

The density is intentional because:

- Slides are maps, not scripts. The sales rep navigates based on the conversation, not reads top-to-bottom.
- Every client conversation is different. Dense slides let the rep pivot to what matters for this buyer.
- Depth signals credibility. When a prospect asks a tough question, the answer is on the slide—not "I'll get back to you."
- Fewer slides, more flexibility. Ten dense slides beat forty thin ones when you need to move fluidly through a discussion.

2. These Are "Leave-Behind Ready"

After the meeting, prospects share materials internally. Dense slides:

- Stand alone without the presenter. The CFO who wasn't in the room can still understand the value case.
- Survive the forwarding test. When your champion sends this to their boss, it makes sense.
- Demonstrate substance over style. Research and IT leaders are skeptical of glossy, content-light materials.

3. We're Selling to Two Personas Simultaneously

IT Leaders Want	R&D Leaders Want
Technical credibility	Scientific credibility
Integration details	Workflow understanding
Governance and risk	Adoption and outcomes
TCO and efficiency	Discovery acceleration

4. The Bottom Line

Simple slides are for simple sales. Complex, high-value research informatics transformations require materials that match the sophistication of the conversation.

Our buyers are smart, busy, and skeptical. They don't want a pitch—they want a substantive discussion with a partner who understands their world. Dense slides signal: we've thought about this deeply, and we're ready to go as deep as you want to go.

EPAM Continuum Proprietary & Confidential.

Supplementary Notes for Sales Teams

Slide Selection by **Meeting Type:**

Meeting Type	Recommended Slides
Cold introduction (30 min)	1, 3, 10
Discovery meeting (60 min)	1, 2, 3, 7, 9
Solution presentation (60 min)	3, 4, 5, 6, 8
Executive briefing (45 min)	1, 2, 4, 8, 10
Proposal review (60 min)	5, 6, 8, 9, 10

Talking Point by **Persona Emphasis:**

If primarily IT audience:	If primarily R&D audience:
Lead with integration complexity	Lead with researcher productivity
Emphasize governance and security	Emphasize adoption and outcomes
Use IT cost reduction metrics	Use discovery acceleration metrics
Reference case studies with TCO	Reference case studies with cycle time
Position OCM as adoption insurance	Position OCM as researcher empowerment

Qualification Criteria for $1-5M Deals

Must have (all required):
- Research organization with 200+ researchers
- Annual R&D budget >$100M
- Identified executive sponsor (VP+ in IT or R&D)
- Budget available or budget cycle alignment within 6 months
- Strategic priority alignment (Lab of Future, AI, Digital, etc.)

Should have (2+ of these):
- Active RFP or initiative in progress
- Competitive pressure or burning platform
- Recent organizational change (merger, new leadership)
- Prior relationship or reference introduction

Nice to have:
- Incumbent partner challenges creating opening
- Board or executive mandate for transformation
- Clear timeline with milestones

EPAM Continuum Proprietary & Confidential.

Objection Handling Quick Reference

Objection	Response
"We're doing this internally"	"What capabilities would complement your internal team? We often work alongside internal teams on specialized areas."
"We already have a partner for this"	"How is that going? We often come in alongside or after other partners when specialized research expertise is needed."
"Budget isn't available until next year"	"Let's start with a Discovery Workshop to prepare your business case for next year's budget cycle."
"We're not ready yet"	"What would need to be true for you to be ready? Often a maturity assessment helps clarify readiness."
"This is too expensive"	"Let's look at the value framework—what would a 10% improvement in researcher productivity be worth? Even a 3x ROI makes this compelling."
"We've been burned by consultants before"	"I understand. That's why we structure engagements with quick wins and clear accountability—would you like to hear how we've addressed this with other clients?"

Before Every Meeting:

1. Research the company's recent announcements about R&D, digital transformation, AI initiatives
2. Identify known pain points from any previous interactions or public information
3. Determine primary persona (IT vs. R&D vs. both) and customize emphasis
4. Select 2-3 case studies most relevant to their situation
5. Prepare 3-5 specific questions to drive discovery

Research Productivity

Subtitle

Q2 2026

Your R&D Investment Isn't Delivering at the Speed of Science

For IT Leaders:

Your infrastructure supports one of the most complex, data-intensive operations in your enterprise—yet you're being asked to do more with less while enabling capabilities that didn't exist 3 years ago.

Challenge	Business Impact
Data fragmented across 15-50+ systems	6-12 months to integrate new data sources
Every lab instrument speaks a different language	IT teams become bottleneck for research requests
"Shadow IT" solutions proliferating in labs	Security, compliance, and support burden grows
AI/ML initiatives stalled by data quality	Strategic investments fail to deliver ROI

For R&D Leaders:

Your researchers spend more time searching for data than analyzing it. Your competitors are moving faster. The promise of AI remains largely unrealized.

Challenge	Research Impact
Researchers can't find or trust existing data	Experiments repeated unnecessarily
Collaboration blocked by incompatible systems	Cross-functional insights never surface
New tools rejected by scientific staff	Technology investments underutilized
Innovation constrained by operational burden	Time-to-decision measured in months, not days

The Shared Reality

"Organizations are generating more research data than ever—yet making decisions slower than their science allows."

EPAM Continuum Proprietary & Confidential.

The Window for Research Transformation is Open—But Closing

External Pressure

- AI capabilities maturing rapidly
- Competitors accelerating DMTA
- Regulatory complexity increasing
- Patent cliffs creating urgency

Internal Pressure

- Legacy technical debt
- Workforce expectations
- Budget scrutiny
- Talent scarcity

The Strategic Question

”Build sustainable advantage or fall permanently behind?"

The Cost of Waiting

Every quarter of delayed transformation:

- 15-20% of research data generated becomes stranded in legacy systems
- AI readiness gap widens as data debt accumulates
- Competitive advantage erodes as peers move forward
- Change management becomes harder as workarounds become habits

Five Trends Driving Investment Decisions

Trend	What We're Seeing	Strategic Implication
Lab of the Future Momentum	Organizations moving from pilots to enterprise-scale programs	Transformation engagements are expanding; point solutions are losing
AI-Enabled DMTA Compression	Focus on fewer, higher-quality molecules with faster cycle times	AI/ML must be embedded throughout—not bolted on afterward
Advisory-Led Engagements	Strategy and roadmapping preceding technology implementation	Relationships start with vision work, expand into delivery
Accelerated Value Expectations	ROI required in months, not years	Productized accelerators and proven frameworks are differentiators
Domain Expertise Premium	Deep research informatics knowledge commands premium positioning	Technical implementation skills alone are commoditized

EPAM Continuum Proprietary & Confidential.

Ten Ways We Accelerate Research Outcomes

#	Solution	IT Value	R&D Value	Typical Investment
1	Lab of the Future Strategy & Roadmap	Clear technology architecture; prioritized investments	Unified vision connecting research goals to capabilities	$500K-1.5M
2	Research Data Platform Modernization	Reduced integration burden; scalable infrastructure	Data findable, accessible, trustworthy	$1-3M
3	AI/ML Readiness & Foundation	Production-ready ML infrastructure	AI initiatives that actually work	$750K-2M
4	DMTA Cycle Optimization	Automated workflows; reduced manual integration	Faster hypothesis-to-answer cycles	$1-2.5M
5	Research Informatics Operating Model	Clear ownership; sustainable support model	Research teams empowered, not dependent	$400K-1M
6	Data Governance & Quality Program	Compliance confidence; reduced data risk	Trustworthy data for decision-making	$500K-1.5M
7	System Rationalization & Integration	Simplified landscape; reduced TCO	Seamless researcher experience	$750K-2M
8	Organizational Change Management	Adoption success; reduced resistance	Researchers embrace new capabilities	$300K-800K
9	Emerging Technology Assessment	Informed build/buy decisions; vendor leverage	Access to latest capabilities	$200K-500K
10	Predictive Analytics & Data Science Enablement	Scalable analytics infrastructure	Insights from data, not just storage	$500K-1.5M

Solution Combinations for Maximum Impact

Foundation Package (Solutions 1, 2, 6): "See the whole picture before you build" Ideal for organizations early in transformation journey. Delivers strategy, data platform vision, and governance framework as integrated foundation.

Acceleration Package (Solutions 3, 4, 7): "Move faster without breaking things" For organizations with strategy in place, ready to execute. AI foundation, DMTA optimization, and system integration delivered in coordinated program.

Transformation Package (Solutions 1-8): "Enterprise-scale research transformation" Comprehensive multi-year engagement covering strategy through change management. Typical $3-5M annual investment with measurable milestone delivery.

EPAM Continuum Proprietary & Confidential.

We Understand Research.
We Deliver Technology. We Drive Change.

The Problem with Most Partners

Common Partner Approach	Why It Fails	What Happens
Technology-first implementers	Build systems without understanding research context	Researchers reject tools; ROI never materializes
Strategy-only consultants	Deliver recommendations without delivery capability	PowerPoints sit on shelves; nothing changes
Domain specialists **without scale**	Understand research but can't execute enterprise programs	Pilots succeed; enterprise rollout fails
Generalist system integrators	Apply standard IT playbooks to specialized research needs	Solutions don't fit; rework and overruns

Credentials Snapshot

Metric	Proof Point
Research Informatics Programs Delivered	10,000+
Top 20 Pharma Relationships	18
Years Average Client Tenure	10 years
Researchers Supported by Our Solutions	500,000

Our Four Differentiators

1. Deep Research Expertise. We understand how research actually works—the data generated, the technologies used, the workflows that matter. Our team includes former researchers, research IT leaders, and informatics specialists who speak your language.

Why it matters to IT: *We don't need your team to translate research requirements—we already understand them. Why it matters to R&D: We design for how researchers actually work, not how technologists think they should work.*

2. End-to-End Capability. From opportunity identification through strategy, implementation, change management, and continuous improvement—we support the full journey, not just pieces of it.

Why it matters to IT: *Single accountable partner; no finger-pointing between strategy and implementation vendors. Why it matters to R&D: Sustained partnership focused on outcomes, not project completion.*

3. Physical and Digital Integration. We bridge lab instruments, devices, and physical workflows with digital platforms—connecting the bench to the database.

Why it matters to IT: *We solve the hardest integration problems—the ones where data originates. Why it matters to R&D: Seamless data flow from instrument to insight.*

4. Human-Centered Design. Solutions designed around how researchers think and work—reducing friction, not adding complexity.

Why it matters to IT: *Higher adoption rates; fewer support tickets; less shadow IT. Why it matters to R&D: Tools that empower rather than burden; researchers become advocates.*

EPAM Continuum Proprietary & Confidential.

A Partnership Model Built for Research Transformation

PHASE 1 DISCOVER (4-8 weeks)
- Stakeholder alignment
- Current state assessment
- Opportunity prioritization
- Quick wins identification

PHASE 2 DESIGN (8-12 weeks)
- Solution architecture
- Roadmap development
- Business case refinement
- Governance design

PHASE 3 DELIVERY (6-18 months)
- Agile implementation
- Change management
- Knowledge transfer
- Milestone delivery

PHASE 4 DRIVE (Ongoing)
- Continuous improvement
- Innovation pipeline
- Value tracking
- Expansion planning

What Makes Our Approach Different

Traditional Approach	Our Approach
Lengthy discovery phases before any value	Quick wins delivered within first 90 days
Strategy consultants hand off to implementers	Integrated teams from strategy through delivery
Technology-centric implementation plans	Research workflow-centric design
Training at go-live	Change management embedded throughout
Project completion = engagement end	Value realization = success measure

Investment Protection

Risk	Our Mitigation
Strategy doesn't translate to implementation	Same team, same accountability throughout
Technology doesn't fit research needs	Researcher involvement in every design decision
Change resistance derails adoption	OCM workstream with dedicated resources
Budget overruns	Fixed-price phases; gain-share models available
Knowledge walks out the door	Embedded knowledge transfer; documentation standards

Governance & Transparency

For IT Leaders:
- Architecture review boards with your enterprise architecture team
- Security and compliance checkpoints built into delivery
- Integration patterns aligned to your standards
- Clear hand-off and support transition plans

For R&D Leaders:
- Research leadership steering committees
- Researcher advisory panels influencing design
- Adoption metrics tracked and visible
- Outcome-based success criteria

For Both:
- Joint executive sponsor engagement
- Monthly value realization reviews
- Issue escalation paths that work
- Transparent resource and budget tracking

EPAM Continuum Proprietary & Confidential.

Results That Matter: Research Transformation in Action

Case Study 2: [Biotech] DMTA Cycle Acceleration

The Challenge: A mid-sized biotech company running multiple oncology programs needed to compress design-make-test-analyze cycles to stay competitive with well-funded rivals.

What We Did:

- AI/ML readiness assessment and data foundation work
- DMTA workflow automation across computational chemistry and screening
- Predictive model development for compound prioritization

Results:

- DMTA cycle time reduced from 12 weeks to 8 weeks (33% improvement)
- Compounds entering testing reduced by 40% with same hit rate (higher quality candidates)
- 2 programs accelerated by 6+ months to IND

Investment: $2.8M over 18 months
ROI: Program acceleration valued at $50M+ in NPV

Case Study 1: [Large Pharma] Lab of the Future Program

The Challenge: A top 10 pharmaceutical company faced fragmented data across 40+ research systems, with researchers spending 30% of their time searching for and preparing data rather than analyzing it.

What We Did:

- Phase 1 (12 weeks): Lab of the Future strategy; prioritized 3-year roadmap; business case for $15M investment
- Phase 2 (18 months): Research data platform implementation; integration of 12 highest-value data sources
- Phase 3 (Ongoing): Data governance program; AI/ML enablement foundation; change management

Results:

- **Research data retrieval:** Reduced from 4-6 hours to just 15 minutes (95% faster)
- **New data source integration:** Cut from 6-9 months to 4-6 weeks (80% faster)
- **Data quality confidence:** Doubled from 35% to 78% among researchers
- **Repeated experiments:** Dropped from ~15% to <3% due to improved data findability

Investment: $4.2M over 24 months
Estimated Annual Value: $12M+ in researcher productivity and reduced redundancy

Case Study 3: [Pharma] Research Info. Operating Model

The Challenge: Following a merger, a pharmaceutical company had duplicate systems, conflicting processes, and no clear ownership of research informatics capabilities.

What We Did:

- Research informatics maturity assessment across combined organization
- Operating model design with clear roles, governance, and service definitions
- System rationalization roadmap reducing application count by 40%
- Change management program for new ways of working

Results:

- Operating costs reduced by $8M annually through system consolidation
- Support ticket volume reduced by 60%
- Researcher satisfaction (measured by NPS) improved from -15 to +25

Investment: $1.5M over 12 months
Annual Savings: $8M ongoing

EPAM Continuum Proprietary & Confidential.

Understanding Your Starting Point: Research Informatics Maturity

The Research Informatics Maturity Model

Level	Data Foundation	Technology Integration	Process Optimization	AI/ML Readiness	Organizational Capability
5 - Optimizing	Continuous data quality improvement; predictive data management	Self-optimizing integrations; event-driven architecture	Processes continuously refined based on outcomes	AI/ML embedded in core decisions; autonomous optimization	Learning organization; innovation embedded
4 - Managed	Enterprise data governance; quality metrics tracked	Enterprise integration platform; APIs standardized	Standard processes measured and improved	Production ML models; data science embedded	Centers of excellence; clear ownership
3 - Defined	Data standards defined; governance structure exists	Integration patterns established; some automation	Key processes documented; some optimization	ML experimentation; dedicated data science	Dedicated informatics function; defined roles
2 - Developing	Some metadata capture; siloed governance	Point-to-point integrations; manual processes	Processes exist but inconsistent	Awareness of AI/ML potential; pilots	Distributed capabilities; ad hoc coordination
1 - Initial	No standards; data quality unknown	Manual data transfer; no integration strategy	Heroic efforts; undocumented processes	No AI/ML activity	No formal informatics function

Where Most Organizations Are:
- Data Foundation: Level 2-3 (standards exist but not enforced; governance is patchy)
- Technology Integration: Level 2 (point-to-point integrations creating spaghetti architecture)
- Process Optimization: Level 2-3 (some processes documented but inconsistent execution)
- AI/ML Readiness: Level 1-2 (pilots but no production capabilities)
- Organizational Capability: Level 2-3 (some dedicated roles but unclear ownership)

What Leaders Look Like:
- Consistent Level 4+ across dimensions
- Data foundation enabling AI/ML at scale
- Integration platform supporting rapid new capability deployment
- Processes optimized around researcher experience
- Clear organizational ownership with appropriate investment

Self-Assessment Questions

For IT Leaders:
1. How long does it take to integrate a new data source into your research platforms?
2. What percentage of your research applications are on supported, current versions?
3. Can you confidently answer compliance questions about research data lineage?
4. How much of your IT spend is on maintaining legacy research systems vs. new capabilities?

For R&D Leaders:
1. Can your researchers find and trust data from other groups' experiments?
2. How much time do researchers spend on data preparation vs. analysis?
3. Are you able to run AI/ML projects in production, or are they all pilots?
4. When you introduce new tools, what's your adoption rate after 6 months?

For Both:
1. Do you have a clear Lab of the Future vision aligned between IT and R&D?
2. Is there a multi-year research informatics roadmap with funding commitment?
3. How do you measure and track value from research informatics investments?

EPAM Continuum Proprietary & Confidential.

Quantifying the Return on Research Informatics Investment

Efficiency Value Drivers

Value Driver	Typical Metrics	Sample Calculation
Researcher Time Savings	Hours/week on data tasks × researcher cost × FTE count	5 hrs/week × $150/hr × 500 FTEs = $19.5M/year potential
Reduced Experiment Redundancy	% experiments repeated × cost per experiment × volume	10% × $50K × 2,000 experiments = $10M/year waste
IT Cost Reduction	Integration/support costs × reduction %	$15M IT spend × 20% reduction = $3M/year
System Consolidation	License + support costs × systems retired	$500K/system × 15 systems = $7.5M one-time

Effectiveness Value Drivers

Value Driver	Typical Metrics	Sample Calculation
DMTA Cycle Acceleration	Weeks saved × programs × cost of delay	4 weeks × 10 programs × $2M/week = $80M value
Higher Quality Candidates	Reduced attrition × cost per failed program	10% lower attrition × $50M avg failed program = $5M/program
Better Data Utilization	Value of insights from existing data	Often 2-5x ROI on data that already exists
Decision Speed	Time to key research decisions × cost of delay	Harder to quantify but often highest value

Enablement Value Drivers

Value Driver	Typical Metrics	Sample Calculation
AI/ML Production Capability	Value of AI-enabled research acceleration	Often $50-100M+ NPV for successful programs
Competitive Differentiation	Market position; pipeline strength; talent attraction	Strategic value; board-level conversation
New Research Modalities	Ability to pursue new therapeutic approaches	Platform for future growth

Business Case Framework

Investment Profile:

- Year 1: $1.5-2.5M (Strategy + Foundation + Quick Wins)
- Year 2: $1.5-2.0M (Platform Implementation + Scale)
- Year 3: $0.5-1.0M (Optimization + Continuous Improvement)
- Total 3-Year Investment: $3.5-5.5M

Value Profile:

- Efficiency gains: $3-8M annually (begins Year 1)
- Effectiveness gains: $10-50M+ (begins Year 2)
- Enablement value: Strategic positioning (builds over time)
- Typical 3-Year ROI: 3-10x depending on scope and execution

EPAM Continuum Proprietary & Confidential.

From Conversation to Value: Your Path Forward

Three Starting Points Based on Your Situation

Option A: "We Know We Need to Transform But Need a Clear Vision"
→ Lab of the Future Strategy & Roadmap

Details	Duration: 10-14 weeks (Investment $500K-$1M)
Deliverables	Future state vision; prioritized roadmap; business case; governance recommendations
Outcome	Aligned stakeholders; funded multi-year program; clear implementation path
Next Step	Platform implementation or Operating Model work

Option B: "We Have a Strategy But Need Help Understanding Our Current State"
→ Research Informatics Maturity Assessment

Details	Duration: 6-8 weeks (Investment $250K-$400K)
Deliverables	Maturity assessment across 5 dimensions; gap analysis; prioritized recommendations
Outcome	Clear understanding of starting point; prioritized investment areas
Next Step	Strategy refinement or targeted implementation

Option C: "We're Ready to Execute and Need a Capable Partner"
→ Accelerated Implementation Sprint

Details	Duration: 12-16 weeks (Investment: $750K-$1.5M)
Deliverables	Working solution(s) addressing priority use cases; foundation for scale
Outcome	Tangible value delivered; proof of partnership capability; platform for expansion
Next Step	Program expansion based on results

What happens next?

This Meeting	Week 1-2	Week 3-4	Week 5+
Align on priorities and pain points	Discovery workshops with key stakeholders	Solution and design scoping	Proposal and commercial terms

Discovery Workshop (No-cost): We invest 1/2 day (2-4 days 100K, can be credited against future work) with your key stakeholders to understand your specific situation, validate priorities, and design the right engagement. This ensures we're solving the right problems and builds confidence before any commitment.

Questions to Discuss Now

1. What's driving urgency for research informatics investment in 2026?
2. Who else needs to be part of this conversation (IT, R&D, Finance)?
3. What does success look like in 12 months? In 3 years?
4. What budget cycle are you planning for?
5. Have you worked with partners on similar initiatives? What worked/didn't work?

EPAM Continuum Proprietary & Confidential.

The Right Partner for Your Research Transformation

The Research Informatics Challenge

Your Reality	Our Response
Research data is fragmented, inconsistent, and hard to find	We build FAIR data foundations that accelerate discovery
AI/ML initiatives stall due to data quality and infrastructure	We create AI-ready platforms that deliver production value
New tools are rejected by researchers	We design human-centered solutions that people actually use
IT and R&D can't align on priorities	We bridge business and research perspectives
Technology investments fail to deliver ROI	We measure success by outcomes, not outputs

Why We're Different

Differentiator	What It Means for You
Deep Research Expertise	We understand your science, your data, your workflows—no translation needed
End-to-End Capability	One accountable partner from strategy through delivery and beyond
Physical + Digital Integration	We connect the bench to the database—where data originates
Human-Centered Design	Solutions researchers embrace, not endure

Proven Results

Metric	Typical Client Outcome
Researcher time on data tasks	50-80% reduction
Data integration time	60-80% faster
DMTA cycle time	25-40% compression
System/application count	30-50% reduction
Adoption rate for new tools	2-3x improvement
ROI on engagement	3-10x over 3 years

10 Ways We Accelerate Your Research

1. Lab of the Future Strategy & Roadmap
2. Research Data Platform Modernization
3. AI/ML Readiness & Foundation
4. DMTA Cycle Optimization
5. Research Informatics Operating Model
6. Data Governance & Quality Program
7. System Rationalization & Integration
8. Organizational Change Management
9. Emerging Technology Assessment
10. Predictive Analytics & Data Science Enablement

Next Steps

- Let's start with a Discovery Workshop:
- 2-4 days with your key stakeholders
- No cost, high value
- Validate priorities and design the right engagement
- Build confidence before commitment

Contact:

Appendix: Supporting Materials
Available upon request:

- Detailed case studies (under NDA)
- Technical architecture references
- Methodology documentation
- Team bios and credentials
- Reference client introductions
- ROI modeling templates
